

Final Year Project Repo for William Holbrook

Pre-commit Hooks

This project makes use of pre-commit hooks. To install them first download pre-commit using pip:

```
pip install pre-commit
```

Then install the hooks specified in `.pre-commit-config.yaml` by running `pre-commit install`

Further details can be found [here](#)

Python pre-commit hooks are set up to only run on the "backend" directory and "JavaScript" are only set up for the frontend directory
